QM47400 · Spring 2027 · Poster-to-Product

Turn Your Poster Into a Tool a Manager Can Use

DUE	**Team product: Monday, April 26, 2027, 11:59 PM ET.** Showcase in class Wednesday, April 28. **Your own live link: Wednesday, April 28, 2027, 11:59 PM ET**
OPENS	Friday, April 16, 2027 (kickoff in class)
SUBMIT	Team, one submission: `dashboard.html`, `brief.pdf`, `poster.pdf`, `video_link.txt`. Individually: your live dashboard link and a one-sentence description
GRADING	5% of the course grade, 100 points: product 48, team debrief 12, peer evaluation 20, individual live link 20

What this milestone is for

After the conference, your team spends the last weeks of the term working like a product team. You turn your validated model into something a business decision-maker can use: **(1) an interactive dashboard, (2) a one-page brief and (3) a three-minute video**, built with an AI assistant and checked against your own evidence. You leave with a product you can show an employer, real feedback, and practice in checking AI-built work. [[PENDING p2p-funding: in Fall 2026 a Daniels grant (ending Dec 31, 2026) paid for a Claude seat for everyone in the course and for the outside reviewers; Spring 2027 funding is not confirmed yet]]

What to do

1. **Friday, April 16 (class): kickoff.** Open your team's AI workspace and finish this sentence together: *"Our dashboard helps ___ decide ___."*
2. **Before class on Monday, April 19: export your evidence.** Paste the export cell (on Brightspace) at the end of your final notebook, point its first lines at your own model, data, cross-validation splitter and metric, and run it. **Check that the cross-validation number it prints matches your poster.** Upload the two files it saves, with your poster PDF, to your team's AI workspace.
3. **Monday, April 19 (class): build.** Ask the assistant for the dashboard, for example: *"Build a dashboard as ONE self-contained HTML file (all data and code inside, no internet needed) that helps [who] decide [what]. Use only the numbers in the attached files. Add [one filter] and [one comparison]. Show our cross-validation result and our limitations. Describe top features as what the model relies on, not as causes. Do not invent data."*
4. **Wednesday, April 21 (class): test it.** Download the HTML and open it on a different computer. Click every control, then check three numbers against your notebook.
5. **Friday, April 23 (class): the classmate check.** Give two classmates from another team one minute each. Can they find (a) the decision, (b) the key number and (c) one limit? Fix what they missed.
6. **Monday, April 26, 11:59 PM: submit,** one submission per team: `dashboard.html`; `brief.pdf` (use the template on Brightspace); `poster.pdf` (your final conference poster); and `video_link.txt`, an unlisted link to your three-minute video. The video follows the storyboard decision, demo, key number, one limit; turn on captions and check that the link plays when you are signed out. Change nothing after this deadline.
7. **Wednesday, April 28 (class): showcase and an 8-minute team debrief.** At your station, your team answers five short questions: Who decides what with your product? How good is your model, and how

do you know? What should a manager *not* conclude? How did you check something the AI built? What would you fix first?

8. **Wednesday, April 28, 11:59 PM, on your own: your live dashboard link.** Publish your team's final `dashboard.html`, unchanged, under your own account, and submit on Brightspace the link plus one sentence for your résumé or LinkedIn: *"This dashboard helps [who] decide [what], using [evidence]."* With GitHub Pages it takes about ten minutes: create a free account and a new **public** repository; upload `dashboard.html` renamed to `index.html`; go to Settings, then Pages, and deploy from the branch `main`; your link is `https://<username>.github.io/<repository>/`. Open it on your phone, logged out, before you submit. Publish only if your data are public; otherwise ask Professor Moreira before Monday, April 26.
9. **Friday, April 30: peer evaluation** (due 11:59 PM) and the end-of-course reflection survey.

What to submit

As a **team**, one Brightspace submission by Monday, April 26: the four files above. **Individually**, by Wednesday, April 28: your live link and its one-sentence description.

How it is graded

Poster-to-Product is 5% of the course grade, scored out of 100 points:

- **48, product (team):** reviewers' average ratings of your product on the judging rubric (attached on Brightspace), which has four criteria worth 12 points each: decision usefulness, clarity and ease of use, evidence and honesty, and communication. Professor Moreira reviews every product and assigns the final grade. [[PENDING p2p-funding: who reviews the products if there are no outside reviewers]]
- **12, team debrief** at the showcase.
- **20, peer evaluation** of your sprint team.
- **20, your live dashboard link** (individual, graded by the TAs).

You will receive all the reviewers' comments.

Rules and tips

- Use only your project's real data and results.
- Do not open or re-test your test set: it was opened once, for your champion, in Milestone 08.
- Do not upload personal or private data to any AI tool.
- Stuck? Ask your TA.

The Final Project Overview PDF has every date, the meeting rounds, and how the project is graded.
